SKILLS

Software Engineering: OOP, Data Structures, Algorithms, SDLC, Git, Linux, Agile, CI/CD

Technologies: Python(Flask), JavaScript (ES6+), TypeScript, Angular(familiarity),Java, React, Node.js, Express, REST APIs, PostgreSQL, SQL, HTML5, CSS3

EXPERIENCE

AI/ML Software Engineer October 2025 - January 2026
Freelance, Remote

- Identified edge cases, performed debugging analysis, and resolved system defects to improve software reliability.
- Applied structured evaluation techniques to support model training and improve training data quality using scoring and benchmarking criteria.
- Used Git/GitHub to manage source code, track changes, and support iterative development and testing.
- Built and tested API-based workflows for integrating AI capabilities with software applications and external data sources.

AI & Power Platform Developer May 2025 - July 2025
NTC Tech Consultancy, LLC - Automation Systems, Remote

- Developed business applications and workflow automation using Power Apps, Power Automate, SharePoint Online, and Microsoft 365.
- Built full-stack and API-integrated solutions using React, Node.js, REST APIs, and connected data sources.
- Created Power BI dashboards and operational reports using connected data sources and structured business data.

ServiceNow & IT Automation Engineer February 2024 - October 2024
SAIC, Fort Bragg, NC

- Performed Layer 1–2 troubleshooting for workstations, hardware, software, accounts, and network connectivity.
- Supported enterprise help desk operations using ServiceNow for incident management, escalation, and technical troubleshooting.
- Coordinated network outages and escalated infrastructure issues to appropriate technical teams.

EDUCATION

Bachelor of Science in Computer Science (B.S.) December 2028
Full Sail University, Winter Park, FL

- **Relevant Coursework:** Data Structures, Algorithms, OOP, Software Engineering.

Coursework in Software Development. November 2025
California Institute of Applied Technology, San Diego, CA

- **Relevant Coursework:** Web Development, API Development, Databases, SDLC.

Full Stack Immersive.
May 2025.
Skillspire Bootcamp, Bellevue, WA.

- Relevant Coursework: Full-Stack Web Development, React, Node.js, REST APIs, MongoDB, Flask.

PROJECT LIST

Fitness Tracker Application

- Built a full-stack fitness tracker using React, Python Flask, and SQLite, executing CRUD operations to manage workout data.
- Designed and implemented RESTful API endpoints and database integration to manage application data and business logic.
- Developed backend services using Python (Flask), implementing RESTful APIs, database models, and application logic-skills directly transferable to Django-based architectures.

Project Eclipse Systems Prototype

- Developed an object-oriented C++ combat prototype using Player, Enemy, and Ability classes.
- Used std::vector and references to manage multiple Ether abilities and randomized enemy encounters.
- Implemented combat mechanics including Basic Attack, Guard, enemy counterattacks, health/defeat logic, Ether resource management, and input validation.
- Managed development through Git/GitHub using branches, issues, milestones, testing, and iterative refactoring.
